1. Ensuring women access to preventive health care, including contraception, is a key element in safeguarding women's overall health and well-being, and is therefore a critical component of the States' public health interests. Contraceptives are among the most widely used medical services in the United States and are much less costly than maternal deliveries for women, insurers, employers and states, and consequently the use of contraceptives has been shown to result in net savings to women and to states. Starting in 2012, as part of the Patient Protection and Affordable Care Act (ACA), most group health insurance plans were required to cover all Food and Drug Administration (FDA)-approved contraceptive methods without cost-sharing (e.g. out of pocket health expenses on copays, deductibles, or coinsurance) for beneficiaries. 45 C.F.R. § 147.130(a)(1)(iv); 29 C.F.R. § 2590.715-2713(a)(1)(iv); 26 C.F.R. § 54.9815-2713(a)(1)(iv). Since this contraceptive-coverage requirement took effect, women across the country have saved \$1.4 billion.

27  
28  
2. On October 6, 2017, the U.S. Health and Human Services (HHS), in conjunction with the U.S. Department of Labor and U.S. Department of the Treasury, issued two illegal interim final rules (IFRs), 2017-21851 and 2017-21852. The IFRs drastically change access to contraceptive coverage by expanding the scope of the religious exemption to, among other things, allow *any* employer *or* health insurer with religious objections to opt out of the contraceptive-coverage requirement with no assurances that the federal government will provide critical oversight to ensure coverage. Additionally, the IFRs expand the exemption to include employers with "moral" objections to providing contraceptive coverage. Unlike the prior regulations, the IFRs eliminate the automatic seamless mechanism for women to continue to receive contraceptive coverage if their employer opts out. Further, under this new regime, there is not even a requirement that the employer notify the federal government of a decision to stop providing contraceptive coverage. Therefore, millions of women across the nation may be left without access to contraceptives and contraceptive counseling, leaving the States to shoulder the additional fiscal and administrative burdens as women seek access for this coverage through

1 state-funded programs, and the public health consequences if women are unable to gain that  
2 access.

3 3. The State of California, the State of Delaware, the State of Maryland, the State of  
4 New York, and the Commonwealth of Virginia (collectively, “the States”), challenge the illegal  
5 IFRs and seek an injunction to prevent the IFRs from taking effect because the regulations violate  
6 the Administrative Procedure Act (APA), the Establishment Clause of the First Amendment, and  
7 the Equal Protection Clause of the Fifth Amendment. Furthermore, the issuance of the IFRs will  
8 cause immediate and irreparable harm to the States.

### 9 JURISDICTION AND VENUE

10 4. This Court has jurisdiction pursuant to 28 U.S.C. § 1331 (action arising under the  
11 laws of the United States), 28 U.S.C. § 1361 (action to compel officer or agency to perform duty  
12 owed to Plaintiff), and 5 U.S.C. §§ 701-706 (Administrative Procedure Act). An actual  
13 controversy exists between the parties within the meaning of 28 U.S.C. § 2201(a), and this Court  
14 may grant declaratory relief, injunctive relief, and other relief pursuant to 28 U.S.C. §§ 2201-  
15 2202 and 5 U.S.C. §§ 705-706.

16 5. Defendants’ issuance of the IFRs on October 6, 2017, constitutes a final agency  
17 action and is therefore judicially reviewable within the meaning of the Administrative Procedure  
18 Act. 5 U.S.C. §§ 704, 706.

19 6. Venue is proper in this Court pursuant to 28 U.S.C. § 1391(e) because this is a  
20 judicial district in which the State of California resides and this action seeks relief against federal  
21 agencies and officials acting in their official capacities.

### 22 INTRADISTRICT ASSIGNMENT

23 7. Pursuant to Civil Local Rules 3-5(b) and 3-2(c), there is no basis for assignment of  
24 this action to any particular location or division of this Court.

### 25 PARTIES

26 8. Plaintiff, the State of California, by and through its Attorney General Xavier Becerra,  
27 brings this action. The Attorney General is the chief law enforcement officer of the State and has  
28 the authority to file civil actions in order to protect public rights and interests. Cal. Const., art. V,

1 § 13. This challenge is brought pursuant to the Attorney General's independent constitutional,  
2 statutory, and common law authority to represent the public interest.

3 9. Plaintiff, the State of Delaware, by and through its Attorney General Matthew P.  
4 Denn, brings this action. The Attorney General is the chief law enforcement officer of the State  
5 of Delaware and has the authority to file civil actions in order to protect public rights and interests.  
6 29 *Del. C.* § 2504.

7 10. Plaintiff, the State of Maryland, by and through its Attorney General Brian E. Frosh,  
8 brings this action. The Attorney General is Maryland's chief legal officer with general charge,  
9 supervision, and direction of the State's legal business. The Attorney General's powers and  
10 duties include acting on behalf of the State and the people of Maryland in the federal courts on  
11 matters of public concern. Under the Constitution of Maryland, and as directed by the Maryland  
12 General Assembly, the Attorney General has the authority to file suit to challenge action by the  
13 federal government that threatens the public interest and welfare of Maryland residents. *Md.*  
14 *Const. art. V, § 3(a)(2); 2017 Md. Laws, Joint Resolution 1.*

15 11. Plaintiff, the State of New York, by and through its Attorney General, Eric T.  
16 Schneiderman, brings this action. New York is a sovereign state in the United States of America.  
17 The Attorney General is New York State's chief law enforcement officer and is authorized to  
18 advance the State's interest in protecting women's access to critical health care services.

19 12. Plaintiff, the Commonwealth of Virginia, by and through its Attorney General Mark  
20 R. Herring, brings this action. Virginia law provides that the Attorney General, as chief executive  
21 officer of the Department of Law, performs all legal services in civil matters for the  
22 Commonwealth. *Va. Const. art. V, § 15; Va. Code Ann. §§ 2.2-500, 2.2-507 (2017).*

23 13. The States have an interest in ensuring women's health care is both available and  
24 accessible. Health care is one of the police powers of the States. The States rely on Defendants'  
25 compliance with the procedural and substantive requirements of the APA in order to obtain  
26 timely and accurate information about activities that may have significant adverse impacts on  
27 access to health care, including contraceptive coverage, and to meaningfully participate in an  
28

1 impartial and public decision-making process that is consistent with the Affordable Care Act's  
2 requirements of free contraceptive coverage.

3 14. Each State is aggrieved by the actions of Defendants and has standing to bring this  
4 action because of the injury to its state sovereignty caused by Defendants' issuance of the illegal  
5 IFRs, including immediate and irreparable injuries to its sovereign, quasi-sovereign, and  
6 proprietary interests. In particular, the States will suffer concrete and substantial harm because  
7 the IFRs frustrate the States' public health interests by curtailing women's access to contraceptive  
8 care through employer-sponsored health insurance.<sup>1</sup>

9 15. Further, the States are aggrieved by the actions of Defendants and have standing to  
10 bring this action because of the injuries that will be caused to the States by the enforcement of  
11 Defendants' IFRs limiting women's ability to obtain contraception. The States will suffer  
12 concrete and substantial harm because it will incur increased costs of providing contraceptive  
13 coverage to many of the women who lost coverage through the IFRs, as well as increased costs  
14 associated with resulting unintended pregnancies and the related attendant harms.

15 16. The States are also aggrieved by Defendants' failure to comply with the notice and  
16 comment procedures required by the APA, because the States have been denied the opportunity to  
17 comment and be heard, prior to the effective date of the IFRs, concerning the impact of the rules  
18 on the States and their residents.

19 17. Defendant Eric D. Hargan is Acting Secretary of HHS and is sued in his official  
20 capacity. Acting Secretary Hargan has responsibility for implementing and fulfilling HHS's  
21 duties under the Constitution, the ACA, and the APA.

22 18. Defendant HHS is an agency of the United States government and bears  
23 responsibility, in whole or in part, for the acts complained of in this Complaint. The Centers for  
24 Medicare and Medicaid Services is an entity within the HHS.

25  
26  
27 <sup>1</sup> Though this complaint focuses on how the IFRs target women, the IFRs also may affect  
28 people who do not identify as women, including some gender non-confirming people and some transgender men.

19. Defendant R. Alexander Acosta is Secretary of the U.S. Department of Labor and is sued in his official capacity. Secretary Acosta has responsibility for implementing and fulfilling the U.S. Department of Labor's duties under the Constitution, the ACA, and the APA.

20. Defendant U.S. Department of Labor is an agency of the United States government and bears responsibility, in whole or in part, for the acts complained of in this Complaint. The Employee Benefits Security Administration is an entity within the U.S. Department of Labor.

21. Defendant Steven Mnuchin is Secretary of the U.S. Department of the Treasury and is sued in his official capacity. Secretary Mnuchin has responsibility for implementing and fulfilling the U.S. Department of the Treasury's duties under the Constitution, the ACA, and the APA.

22. Defendant U.S. Department of the Treasury is an agency of the United States government and bears responsibility, in whole or in part, for the acts complained of in this Complaint. The Internal Revenue Service (IRS) is an entity within the U.S. Department of the Treasury.

## STATUTORY BACKGROUND

### I. THE PATIENT PROTECTION AND AFFORDABLE CARE ACT

23. The ACA requires that certain group health insurance plans cover preventive care and screenings without imposing costs on the employee and his/her covered dependents. 42 U.S.C. § 300gg-13(a). Importantly, this includes women's "preventive care and screenings . . . as provided for in comprehensive guidelines supported by the Health Resources and Services Administration." 42 U.S.C. § 300gg-13(a)(4). During the 2009 debates leading up to the ACA's passage, the United States Congress specifically proposed an amendment to require health plans to cover comprehensive women's preventive care and screenings. This amendment, which came to be called the Women's Health Amendment, relied on guidelines developed by the independent, nonpartisan Institute of Medicine (IOM) and adopted by HHS. It required coverage for "preventive care and screenings" for women to ensure essential protections for women's access to preventive health care not currently covered in other prevention sections of the ACA.

1           24. The IOM assembled a diverse, expert committee to draft a report to determine what  
2 should be included in cost-free “preventive care” coverage for women. The report underwent  
3 rigorous, independent external review prior to its release.

4           25. On or about July 19, 2011, the IOM issued its expert report which included a  
5 comprehensive set of eight evidence-based recommendations for strengthening preventive health  
6 care services. Specifically, the IOM recommended that private health insurance plans be required  
7 to cover all contraceptive benefits and services approved by the FDA without cost-sharing (also  
8 known as out-of-pocket costs such as deductibles and copays).

9           26. These IOM recommendations, developed after an exhaustive review of the medical  
10 and scientific evidence, were intended to fill important gaps in coverage. The recommendations  
11 include coverage for an annual well-woman preventive care visit, specific services for pregnant  
12 women and nursing mothers, counseling and screening for HIV and domestic violence, as well as  
13 services for the early detection of reproductive cancers and sexually transmitted infections.  
14 Significantly, the recommendations include coverage of the full range of all FDA-approved  
15 contraceptive methods, sterilization procedures, and patient education and counseling for all  
16 women with reproductive capacity. The IOM acknowledged the reality that cost can be a  
17 daunting barrier for women when it comes to choosing and using the most effective contraceptive  
18 method. For instance, certain highly-effective contraceptive methods, such as the intrauterine  
19 device (IUD) and the implant, have high up-front costs, which act as a barrier to access despite  
20 the fact that these contraceptives are long-acting and 99 percent effective. The IOM considers  
21 these services essential so that “women can better avoid unwanted pregnancies and space their  
22 pregnancies to promote optimal birth outcomes.”

23           27. The IOM also recommended that “preventive care” include not only contraceptive  
24 coverage such as access to all FDA-approved contraceptives but also counseling and education to  
25 ensure that women received information on the best method for their individual set of  
26 circumstances.

27           28. Following the IOM’s recommendations relating to contraceptive coverage, HHS, the  
28 U.S. Department of Labor, and the U.S. Department of the Treasury promulgated regulations

1 requiring that group health insurance plans cover all FDA-approved contraceptive methods  
2 without cost to women and their covered dependents. 45 C.F.R. § 147.130(a)(1)(iv); 29 C.F.R.  
3 § 2590.715-2713(a)(1)(iv); 26 C.F.R. § 54.9815-2713(a)(1)(iv).

4 29. In implementing this statutory scheme, HHS made clear that these coverage  
5 requirements were not applicable to group health plans sponsored by religious employers.  
6 Further, HHS made available a religious accommodation to certain employers who seek to not  
7 provide this coverage. Through this religious accommodation, the federal government ensured  
8 that women had access to seamless contraceptive coverage as entitled under the ACA, while also  
9 providing employers with a mechanism to opt-out of providing or paying for this coverage.

10 30. In order to effectuate this policy, the Health Resources and Services Administration  
11 (HRSA) issued guidelines implementing the IOM's expert report's recommendations. These  
12 guidelines guaranteed that women received a comprehensive set of preventive services without  
13 having to pay a co-payment, co-insurance, or a deductible.

14 31. HRSA's comprehensive guidelines included a list of each type of preventive service,  
15 and the frequency with which that service should be offered. Under the guidelines, HHS  
16 recognized that well-woman visits should be conducted annually for adult women to obtain the  
17 recommended preventive services that are age- and development-appropriate, including pre-  
18 conception care and many services necessary for prenatal care. Although HSRA recognized that  
19 the well-woman health screening should occur at least on an annual basis, HSRA also noted that  
20 several visits may be needed to obtain all necessary recommended preventive services, depending  
21 on a woman's health status, health needs, and other risk factors. HRSA's guidelines also  
22 included annual counseling on sexually transmitted infections for all sexually active women,  
23 annual counseling and screening for human immunodeficiency virus infection for all sexually  
24 active women, all FDA-approved contraceptive methods, sterilization procedures, and patient  
25 education and counseling for all women with reproductive capacity. These guidelines ensured  
26 that women could access a comprehensive set of preventive services without having to pay a co-  
27 payment, co-insurance, or a deductible to ensure there was no cost barrier.

32. In March 2016, HRSA awarded a five-year cooperative agreement to the American Congress of Obstetricians and Gynecologists (ACOG) to update the women's preventive services guidelines originally recommended by the IOM and work to develop additional recommendations to enhance women's overall health. In that same month, ACOG launched the "Women's Preventive Services Initiative" (WPSI), which was a multidisciplinary steering committee headed by ACOG to update the eight IOM recommendations from 2011. Through this initiative, ACOG partnered with the American Academy of Family Physicians, the American College of Physicians, and the National Association of Nurse Practitioners in Women's Health to achieve this goal. The WPSI issued draft recommendations for public comments in September of 2016 and the updated "Women's Preventive Service Guidelines" were finalized and implemented by HRSA on December 20, 2016 to take effect December 20, 2017. Importantly, these expert, evidence-based medical recommendations continued to include coverage of all FDA-approved contraceptive methods and counseling for women with reproductive capacity, thereby underscoring their importance to women.

33. The ACA forbids the Secretary of HHS from promulgating regulations that block access to health care, and prohibits discrimination on the basis of sex. 42 U.S.C. §§ 18114, § 18116.

## **II. ADMINISTRATIVE PROCEDURE ACT**

34. Pursuant to the APA, 5 U.S.C. § 551 *et seq.*, a reviewing court shall "(1) compel agency action unlawfully withheld or unreasonably delayed; and (2) hold unlawful and set aside agency action, findings, and conclusions found to be ...arbitrary, capricious, an abuse of discretion, otherwise not in accordance with law; [or] without observance of procedure required by law." 5 U.S.C. § 706. The APA defines "agency action" to include "the whole or a part of an agency rule, *order*, license, sanction, relief, or the equivalent or denial thereof, or failure to act." *Id.* § 551(13) (emphasis added); *see id.* § 551(6) (defining "order" to mean "the whole or a part of a final disposition, whether affirmative, negative, injunctive, or declaratory in form, of an agency in a matter other than rule making but including licensing").

## FACTUAL AND PROCEDURAL BACKGROUND

### I. CONTRACEPTIVE COVERAGE

35. Contraceptives are among the most widely used medical products in the United States, with 99 percent of sexually active women having used at least one type of contraception in her lifetime. By the age of 40, American women have used an average of three or four different methods (some of which are available only by prescription), after considering their relative effectiveness, side effects, drug interactions and hormones, the frequency of sexual conduct, perceived risk of sexually transmitted infections, the desire for control, cost, and a host of other factors. Of course, women face the possibility of having children for many years of their life and therefore if a woman only wants two children, for instance, she would need to spend roughly three decades on birth control to avoid unintended pregnancies. Due to the positive impact of contraception for women and society, the Centers for Disease Control and Prevention concluded that family planning, including access to modern contraception, was one of the ten greatest achievements of the 20th Century. Further, one-third of the wage gains women have made since the 1960s are the result of access to oral contraceptives. Access to birth control has helped narrow the wage gap between women and men. The decrease in the wage gap among 25 to 49-year-olds between men's and women's annual incomes would have been 10 percent smaller in the 1980s and 30 percent smaller in the 1990s in the absence of widespread legal birth control access for women.

36. Unintended pregnancy has negative health, fiscal, and societal impacts across the United States. In 2001, an estimated 49 percent of all pregnancies in the United States were unintended, and 42 percent of those unintended pregnancies ended in abortion. More recent studies estimate that the national rate of unintended pregnancies is 45 per 1,000 women aged 15 to 44. Unintended pregnancies are associated with increases in maternal and child morbidity, including increased odds of preterm birth term, low birth weight, and the potentially life-long negative health effects of premature birth. Significantly, the risk of unintended pregnancy is greatest for the most vulnerable women: young, low-income, minority women, without high school or college education.

1           37. There is considerable evidence that the use of contraception has resulted in lower  
2 unintended pregnancy and abortion rates in the United States. The Guttmacher Institute has  
3 found that the two-thirds of women who are at risk for unintended pregnancy and use  
4 contraception consistently account for only 5 percent of unintended pregnancies. Another study  
5 showed that, from the early 1990s to early 2000s, increased rates of contraceptive use by  
6 adolescents were associated with a marked decline in teen pregnancies, with contraception use  
7 accounting for 86 percent of the decline.

8           38. With the decrease in unintended pregnancies and abortions, there is a corresponding  
9 decrease in the risk of maternal mortality, adverse child outcomes, behavior problems in children,  
10 and negative psychological outcomes associated with unintended pregnancies for both mothers  
11 and children. Significantly, access to contraceptive coverage helps women to delay childbearing  
12 and pursue additional education, spend additional time in their careers, and have increased  
13 earning power over the long-term. Contraceptive use also allows for spacing between  
14 pregnancies, which is important because there is an increased risk of adverse health outcomes for  
15 pregnancies that are too closely spaced, and is especially critical for the health of women with  
16 certain medical conditions. There are additional benefits of contraceptive use for treating medical  
17 conditions, including menstrual disorders and pelvic pain, and long-term use of oral  
18 contraceptives has been shown to reduce women's risk of endometrial cancer, pelvic  
19 inflammatory disease, and some breast diseases.

20           39. Contraceptive use achieves significant cost savings as well. In 2002, the direct  
21 medical cost of unintended pregnancy in the United States was nearly \$5 billion, with the cost  
22 savings due to contraceptive use estimated to be \$19.3 billion. Nationwide, in 2010, the  
23 government expended an estimated \$21 billion to cover the medical costs for unplanned births,  
24 miscarriages and abortions.

25           40. Contraceptives are much less costly than maternal deliveries for states, insurers,  
26 employers, and patients, and consequently, they have been shown to result in net savings to  
27 women. The ACA's requirement to cover contraception benefits and services has saved  
28 American women \$1.4 billion since the law took effect in 2012. For instance, the share of

women of reproductive age who had out-of-pocket spending on oral contraceptive pills fell sharply after the ACA; spending on oral contraceptive pills plummeted from 20.9 percent in 2012 to 3.6 percent in 2014, corresponding to the timing of the ACA provision. To date, over 62.4 million women have benefited from this coverage, including 7.4 million in California, over 175,000 in Delaware, nearly 1.3 million in Maryland, 3.8 million in New York, and more than 1.6 million in Virginia. Although both men and women benefit from access to safe and reliable contraceptive care, women disproportionately bear the cost of obtaining contraceptives. This is in part because, of the FDA-approved methods of contraceptives, only two—male sterilization surgery and male condoms—are available for use by men. The methods of contraception at issue in this matter are only available for women.

41. The U.S. Office of the Assistant Secretary for Planning and Evaluation (ASPE) estimated that, in 2011-13, approximately 6,324,503 women in California, 171,575 women in Delaware, 1,225,095 women in Maryland, 3,582,133 women in New York, and 1,587,663 women in Virginia, ages 15-64, had preventative services coverage with zero cost sharing.

42. These cost savings to women have a corresponding fiscal impact on public health, and thus on the States, as well. The ACA's contraceptive-coverage requirement decreases the number of unintended pregnancies, and thereby reduces the costs associated with those pregnancies or termination of those pregnancies. Furthermore, unintended pregnancy is associated with poor birth outcomes and maternal health issues, and thus, the contraceptive-coverage requirement also reduces the number of high-cost births and infants born in poor health.

### **CALIFORNIA**

43. In California, 48 percent of all pregnancies were unintended in 2010. Of those unplanned pregnancies that resulted in births, 64.3 percent were publicly funded, costing California \$689.3 million on unintended pregnancies.

44. In 2014, the California Legislature passed the Contraceptive Equity Act of 2014 (SB 1053), which requires certain health plans to cover certain prescribed FDA-approved contraceptives for women without cost-sharing. Twenty-seven other states have similar contraceptive equity laws, aimed at making contraception cheaper and more accessible.

1           45. In passing the Contraceptive Equity Act, the California Legislature concluded that  
2 providing contraception will result in overall savings in the health care industry due to reduced  
3 office visits, reduced unintended pregnancies, and therefore, reduced prenatal care, abortions, and  
4 labor and delivery costs. In fact, the California Health Benefits Review Program (CHBRP)  
5 anticipated that there would be substantial cost savings, including \$213 million in savings to  
6 private employers, \$86 million in savings to individuals, and \$7 million in savings to CalPERS.  
7 CHBRP also anticipated a cost savings of \$56 million for Medi-Cal managed care. In addition to  
8 these fiscal benefits, there is huge benefit to California's public health. CHBRP estimated that  
9 access to and increased contraceptive use under this Act would result in 51,298 averted  
10 unintended pregnancies and 20,006 fewer abortions.

11           46. California's Contraceptive Equity Act, however, only applies to state-regulated health  
12 plans. It does not apply to self-funded health plans, through which 61 percent of covered workers  
13 are insured. Self-funded health plans are governed by the Federal Employee Retirement Income  
14 Security Act of 1974 (ERISA) and are regulated by the U.S. Department of Labor, Employee  
15 Benefits Security Administration.

16           47. The California Health Care Foundation estimates that as of 2015, 6.6 million  
17 Californians were covered by a self-funded employer health plan. Therefore, the IFRs could  
18 affect over 6 million California women. These women will be left unprotected and the IFRs  
19 threaten California's ability to guarantee health and welfare to its residents by a virtual denial of  
20 free access to contraceptive coverage to women.

21           48. In California, if women do not receive cost-free contraceptive coverage from their  
22 employer, California risks having to absorb the financial and administrative burden of ensuring  
23 access to contraceptive coverage. Due to the IFRs, California women will be forced to utilize the  
24 state's Family Planning, Access, Care, and Treatment (Family PACT) program provided they  
25 meet certain eligibility requirements. Family PACT is administered by the Office of Family  
26 Planning (OFP), an entity within the California Department of Health Care Services, which is  
27 charged by the California Legislature to make available to citizens of the State who are of  
28 childbearing age comprehensive medical knowledge, assistance, and services relating to the

1 planning of families. Family planning allows women to decide for themselves the number,  
2 timing, and spacing of their children.

3 49. Family PACT is available to eligible low-income (under 200 percent of federal  
4 poverty level) men and women who are residents of California. Currently, the program serves 1.1  
5 million eligible men and women of childbearing age through a network of 2,200 public and  
6 private providers. Services include comprehensive education, assistance, and services relating to  
7 family planning. These Californians have no other source of health care coverage for family  
8 planning services (or they meet the criteria specified for eligibility) and they have a medical  
9 necessity for family planning services.

10 50. The 2,200 clinic and private practice clinician provider entities enroll women in  
11 Family PACT across the state. Family PACT clinician providers include private physicians in  
12 non-profit community-based clinics, obstetricians and gynecologists, general practice physicians,  
13 family practice, internal medicine, and pediatrics. Medi-Cal licensed pharmacies and laboratories  
14 also participate by referrals from enrolled Family PACT clinicians.

15 51. Planned Parenthood is one example of a Family PACT provider that enrolls women  
16 into the program. Planned Parenthood currently serves approximately 850,000 patients a year  
17 through 115 health centers. California reimburses Planned Parenthood for family planning  
18 services provided. For every dollar Planned Parenthood spends on family planning services, the  
19 federal government contributes 77.49 cents while the state spends 22.51 cents.

20 52. Because health facilities, including but not limited to Planned Parenthood, will likely  
21 see a spike in patients seeking contraceptive coverage, California will be fiscally impacted  
22 through increased enrollment in Family PACT.

### 23 **DELAWARE**

24 53. Delaware had the highest unintended pregnancy rate in the country in 2010, at a rate  
25 of 62 such pregnancies per 1,000 women aged 15-44. These unintended pregnancies cost the  
26 State and the federal government \$94.2 million. Limiting or removing access to contraception as  
27 contemplated by the IFRs will result in an increase in the rate of unintended pregnancies in the  
28 State of Delaware, which adds a fiscal and administrative burden on the State in the form of

1 increased enrollment in state-funded or sponsored family planning programs. In Delaware, 71  
2 percent of unintended pregnancies are paid for by the State.

3 54. In 2000, the Delaware General Assembly passed legislation, Senate Bill 87 (the  
4 “Delaware Contraceptive Equity Act”), requiring all group and blanket health insurance policies  
5 delivered or issued for delivery in the State, and which provided coverage for outpatient  
6 prescription drugs, to provide coverage for all FDA-approved prescription contraceptives and  
7 other outpatient services related to the use of such drugs and devices. In passing the legislation,  
8 the Delaware General Assembly sought to provide equity in health care coverage by providing  
9 women with insurance coverage for contraceptive-related services and costs not previously  
10 covered.

11 55. Unlike other states’ contraceptive equity legislation, the Delaware Contraceptive  
12 Equity Act does not prohibit cost sharing altogether. Rather, cost sharing is permissible if similar  
13 cost sharing provisions are imposed on other non-contraceptive related healthcare coverage. The  
14 result of enforcing the IFRs is the removal in Delaware of the guaranteed free access to  
15 contraceptive coverage for women provided for under the ACA.

16 56. The Delaware Contraceptive Equity Act only applies to state-regulated health plans.  
17 It does not apply to self-funded health plans, through which over thirty percent of Delawareans  
18 are insured. Self-funded health plans are governed by ERISA and are regulated by the U.S.  
19 Department of Labor, Employee Benefits Security Administration.

20 57. In Delaware, if women do not have guaranteed free access to contraceptive coverage  
21 from their employers as a result of the IFRs, the financial and administrative burden of providing  
22 access to such services may fall back on the State through the increased enrollment in Medicaid  
23 or State-funded programs aimed at providing contraceptives to women who are otherwise unable  
24 to access or afford such coverage elsewhere.

25 58. Under Title X of the Public Health Services Act, the Division of Public Health (DPH)  
26 within the Delaware Department of Health and Social Services offers a wide range of  
27 reproductive health services and supplies to women in the State of Delaware. Family planning  
28

1 services provided by DPH include family planning counseling, birth control supplies, counseling,  
2 education, and referral services, and testing for sexually transmitted diseases.

3 59. DPH services are available to eligible low-income (under 250 percent of the federal  
4 poverty level) Delawareans. Fees for these services and supplies are based on income, and for  
5 Delawareans with income at or below 100 percent of the federal poverty level these services are  
6 provided at no charge. In 2016, DPH provided services under the Title X program to 18,824  
7 eligible Delawareans.

8 60. Planned Parenthood of Delaware (PPDE) is a non-profit 501(c)(3) organization that  
9 works to provide reproductive health care services across the State of Delaware. PPDE currently  
10 serves approximately 8,000 patients each year in three health centers and at mobile sites. PPDE  
11 primarily serves low-income patients with limited access to health care services, and in fiscal year  
12 2017, PPDE provided contraception to nearly 5,600 patients.

13 61. Delaware reimburses PPDE for family planning services it provides, either through  
14 the Medicaid program or Title X. For every dollar PPDE spends on family planning services, the  
15 federal government contributes 90 cents and the state spends 10 cents.

16 62. Because DPH and other publicly-funded service providers like PPDE will likely see a  
17 spike in the number of Delawareans seeking contraceptive coverage as a result of the IFRs,  
18 Delaware will be fiscally impacted through increased enrollment in its family planning programs.  
19 Delaware will also be fiscally impacted by any increase in unintended pregnancies as a result of  
20 the IFRs, the majority of which are paid for by the State.

## 21 **MARYLAND**

22 63. Maryland has the fourth highest unintended pregnancy rate in the country. In 2010,  
23 71,000 or 58 percent of all pregnancies were unintended. Of those unplanned pregnancies that  
24 resulted in births, 58.2 percent were publicly funded, costing Maryland \$180.9 million.

25 64. In 1998, the Maryland Legislature mandated contraceptive coverage for certain State-  
26 regulated plans. In 2016, it built upon this earlier law in enacting the Maryland Contraceptive  
27 Equity Act. The Maryland Contraceptive Equity Act, which goes into effect January 2018,  
28 extends the contraceptive coverage requirements under the ACA by expanding the number of

1 contraception options available without co-payment, requiring coverage of over-the-counter  
2 contraceptive medications, providing for coverage of up to 6-months dispensing of birth control,  
3 and expanding vasectomy coverage without cost-sharing and deductible requirements. With the  
4 contraceptive mandate in 1998 and the Maryland Contraceptive Equity Act in 2016, the State has  
5 demonstrated its long-standing commitment to ensuring access to contraceptive coverage.

6 65. Maryland's contraceptive coverage law applies only to State-regulated health plans.  
7 It does not apply to self-insured commercial health plans, through which 50 percent of covered  
8 Marylanders are insured. The Maryland Insurance Administration estimates that as of 2016, 1.46  
9 million Marylanders were covered by a self-insured commercial health plan.

10 66. Maryland funds three statewide programs that provide access to contraception. Due  
11 to the IFRs, Maryland women who lose contraceptive coverage may be forced to rely on these  
12 statewide programs, creating an administrative and financial burden on the State.

13 67. The Maryland Title X Program supported 71,823 individuals across Maryland in  
14 2016. The program provides family planning related services on a sliding fee scale for  
15 participants with incomes up to 250 percent of federal poverty level. The program covers the  
16 uninsured and underinsured who need wrap-around services. Through these services, Maryland  
17 assisted women in preventing 15,000 unintended pregnancies in 2014. As a result of the IFRs,  
18 more women who are insured will seek wrap-around family planning services from the Title X  
19 Program. The Program has a finite budget of \$9.9 million, which includes \$6 million in State  
20 funds and \$3.9 million in federal funds. Maryland will be unable to meet the additional demand  
21 for services without a significant increase in funding, and a failure to fund will lead to an increase  
22 in unintended pregnancies. Both scenarios create a negative fiscal impact on Maryland.

23 68. The Medicaid Family Planning Waiver Program provides contraceptive coverage to  
24 women up to 200 percent of the federal poverty level. In 2016, the average monthly enrollment  
25 was 12,852 individuals. Program expenditures were \$3.2 million in fiscal 2016, with a split of 10  
26 percent/90 percent in State and federal funding, respectively. This program provides coverage for  
27 the uninsured as well as wrap-around coverage for the underinsured. With the IFRs, more women  
28

1 with insurance will likely seek coverage for contraceptives under the Medicaid Family Planning  
2 Waiver Program. Maryland will be fiscally impacted through increased enrollment.

3 69. Medicaid and the Maryland Children's Health Program (MCHP) cover family  
4 planning services. Maryland covers individuals up to 138 percent of the federal poverty level in  
5 Medicaid and 300 percent federal poverty level in MCHP. As a result of the IFRs, more women  
6 in low income jobs may seek Medicaid coverage for themselves or MCHP coverage for their  
7 children as a result of the loss of contraception coverage in their employers' plans. Thus,  
8 financial burden of coverage would shift to the State. Most adults and children receive their  
9 coverage through the managed care program called HealthChoice. In calendar year 2015,  
10 HealthChoice expenditures for family planning were \$33.7 million in total funds. Family  
11 planning services are generally covered under a 10 percent/90 percent split of State and federal  
12 funds.

13 70. Women who lose coverage may also simply seek services at Planned Parenthood and  
14 other community-based providers. These providers generally offer services on a sliding fee scale  
15 for low-income patients. Under a sliding fee scale, the provider pays for a portion of the services.  
16 These providers may not have the financial capacity to absorb the cost of care for an influx of  
17 patients who have lost contraceptive coverage.

18 71. Finally, women may simply choose to forgo seeking contraceptive and related  
19 services if they do not have the means to pay for it, thereby risking unintended pregnancy and  
20 other poor health outcomes related to reproductive care. Because the State pays for delivery  
21 services for certain low-income women who are uninsured, the State bears a financial risk when  
22 women lose contraceptive coverage. In 2010, the State paid for 19,000 unintended pregnancies  
23 that resulted in birth. The State is also obligated to pay for newborn care, which can be expensive  
24 if there are complications, when those newborns are enrolled in MCHP.

25 **NEW YORK**

26 72. New York has one of the highest rates of unintended pregnancy in the nation. In  
27 2010, the rate of unintended pregnancies was 61 per 1,000 women. Fifty-five percent of all  
28 pregnancies in New York State were unintended in 2010.

1           73. The risk of unintended pregnancy is greatest for the most vulnerable women in New  
2           York: young, low-income, minority women, without high school or college education. In New  
3           York in 2010, the percent of births that resulted from an unintended pregnancy was twice as high  
4           among African-American women, and about 1.5 times higher among Hispanic women, compared  
5           to Caucasian women. Young women with some college education had half as many unintended  
6           pregnancies as high school graduates and one third that of non-graduates. Unmarried young  
7           women with no high school diploma had the highest unintended pregnancy rate.

8           74. In 2010, 59,000, or approximately 70 percent, of unplanned births in New York were  
9           publicly funded. In 2010, the federal and New York State governments together spent \$1.5  
10          billion on births, abortions, and miscarriages resulting from unintended pregnancies; of this,  
11          \$937.7 million was paid by the federal government, and \$601.1 million was paid by the New  
12          York. In that same year, the total public costs for unintended pregnancies in New York was \$380  
13          per woman aged 15–44.

14          75. New York has protected women’s access to contraceptive coverage both through  
15          legislation and law enforcement. In 2003, New York enacted the Women’s Health and Wellness  
16          Act (WHWA), which requires plans governed by New York State law (“fully insured plans” or  
17          “state regulated plans”) to cover contraceptives for female members. N.Y. Pub. Health L. § 602  
18          (2003). Stating that “access to contraceptive services is essential to women’s health and  
19          equality,” the New York State Assembly cited the extensive evidence of contraception use’s  
20          efficacy, and the consequent improvements in public health and the wellbeing of women and their  
21          families. The Assembly noted that “all New Yorkers, regardless of economic status, should have  
22          timely access to contraception and the information they need in order to protect their health, plan  
23          their families and their future.”

24          76. After the ACA’s preventive requirements became effective and plans were required  
25          to provide contraceptives with no cost sharing, in 2015 the New York Attorney General  
26          investigated allegations that health plans were not adhering to these requirements, with the result  
27          that plans corrected any failures, and refunded those members who had paid in error.  
28

1           77. In January 2017, the New York State Department of Financial Services issued  
2 Regulation 62, requiring that state regulated plans not impose cost sharing for contraceptives on  
3 plan members. New York is one of only eight states that require no cost sharing.

4           78. New York's WHWA and Regulation 62 do not apply to self-funded health insurance  
5 plans. Those plans are governed by ERISA and are regulated by the U.S. Department of Labor,  
6 Employee Benefits Security Administration, and have over the years increasingly covered a  
7 growing percentage of New York members.

8           79. As a result of the IFRs, New York employers will qualify for expanded exemptions  
9 and not need to make any accommodation for women to access health plan coverage for  
10 contraceptives. While some of these women may be able to pay for their contraceptive care,  
11 many others will likely seek state-funded programs to provide free or low-cost contraceptives.  
12 These costs will be borne by New York State.

13           80. A variety of New York State programs help to provide family planning services for  
14 hundreds of thousands of women in New York. For example, publicly supported family planning  
15 centers in New York in 2014 served 390,350 female contraceptive clients, and helped avert  
16 94,500 unintended pregnancies the same year, which would have resulted in 45,900 unplanned  
17 births and 34,100 abortions. In 2010, publicly funded family planning services in New York  
18 helped save the federal and state governments approximately \$830 million.

19           81. New York State's Family Benefit program covers women up to 223 percent of the  
20 federal poverty line. In 2016, over 300,000 New York women and men received services through  
21 the New York Department of Health's family planning programs. Women in low-income jobs  
22 whose employers choose exemption from contraceptive coverage may qualify for this program,  
23 thereby shifting the costs of contraceptives for these women to New York State.

24           82. New York State's Children's Health Insurance Plan (CHIP) provides coverage for the  
25 children of women up to 400 percent of the federal poverty line. In 2016, there were  
26 approximately 684,625 children up to 19 years old enrolled in New York's CHIP program, and  
27 the state spent approximately \$156 million on the program. Women whose employers avail  
28 themselves of this broad exemption may turn to the CHIP program for contraceptive coverage for

1 their preteen and teenage children; a demographic particularly at risk for unintended pregnancy.  
2 These costs would be borne by New York State.

3 83. In addition, women whose health plans no longer cover contraceptive care may turn  
4 to providers like Planned Parenthood. But such providers, and Planned Parenthood in particular,  
5 may be unable to satisfy the demand for contraceptive services, because Planned Parenthood  
6 clinics are increasingly at risk of exclusion from federal funding programs including Medicaid,  
7 with the result that some clinics may be forced to close.

8 84. Finally, some women without available contraceptive coverage, will forgo  
9 contraceptive care altogether or consistent contraceptive care, with the consequence of increases  
10 in unintended pregnancies together with all of the attendant costs, including health care risks to  
11 women and children – many of which will be borne by New York State.

## 12 **VIRGINIA**

13 85. In Virginia, prior to the ACA, 54 percent of all pregnancies were unintended in 2010.  
14 Of those unplanned pregnancies that resulted in births, 45.4 percent were publicly funded, costing  
15 Virginia \$194.6 million on unintended pregnancies.

16 86. In contrast to the other States, Virginia does not have a state law Contraceptive  
17 Equity Act. Accordingly, there is no general state-based legal framework to ensure that  
18 employers and insurers provide contraception coverage for women under self-funded health plans  
19 *or* state-regulated health plans. The IFRs will therefore have an even broader impact on the  
20 Commonwealth of Virginia directly, as well as on its population because they could affect every  
21 women who obtains health care through her employer.

22 87. Of the almost 2 million women in Virginia between the ages of 15 and 49, 66 percent  
23 obtain their health insurance coverage from employer-sponsored plans.

24 88. CoverVirginia's Plan First is Virginia's limited benefit family planning program that  
25 covers all birth control methods provided by a clinician and some birth control methods obtained  
26 with a prescription, such as contraceptive rings, patches, birth control pills, and diaphragms. 12  
27 VAC 30-30-20. Plan First also covers family planning and education.  
28

1           89. Individuals are eligible for Plan First if they are not eligible for full benefits under  
2 Medicaid or the Family Access to Medical Insurance Security (FAMIS) Plan, are legally residing  
3 in Virginia, and meet certain income limits. Even those with private insurance may nevertheless  
4 be eligible for Plan First.

5           90. Plan First eligibility is set by income limits that are a function of family size and  
6 monthly income level. In general, families with income below 200 percent of the applicable  
7 federal poverty guideline are eligible. As of October 1, 2017, 115,895 individuals were enrolled  
8 in Plan First. The total spent on Plan First in State Fiscal Year 2017 (July 1, 2016 through June  
9 30, 2017) was \$7,142,414.

10          91. Plan First providers include 1,185 physicians, 1,230 pharmacies, 67 hospitals, and  
11 hundreds of other providers, such as clinics. Two of the top five providers of Plan First services  
12 are the University of Virginia Hospital and the Medical College of Virginia Hospital, both part of  
13 state-supported health systems.

14          92. Because eligible women denied no-cost coverage from employers and/or insurers  
15 exploiting the “moral” or “religious” exceptions of the IFRs will likely seek access to state funded  
16 alternatives, Virginia will be fiscally impacted through increased enrollment in Plan First.

17          93. Additionally, state providers, such as the Medical College of Virginia Hospital and  
18 the University of Virginia Hospital, do not recover 100 percent of the cost of the care they  
19 provide under Plan First. Accordingly, an increase in women seeking services from these two  
20 hospital systems under Plan First will have an additional impact on Virginia’s financial  
21 obligations through the institutions themselves.

22          94. In 2016, the Virginia Department of Health (VDH) served 47,869 family planning  
23 clients, of whom 30.2 percent were insured and 69.8 percent were uninsured. According to VDH,  
24 the state has approximately 19,000 teen pregnancies, 9,500 unintended pregnancies, and 20,000  
25 abortions annually.

26          //

27          //

**II. PRIOR REGULATORY FRAMEWORK PROVIDING ACA CONTRACEPTIVE-COVERAGE REQUIREMENT AND PROTECTING RELIGIOUS EXERCISE**

95. In implementing the ACA, HHS contemplated laws protecting religious exercise. To that end, although the ACA requires coverage of women's preventive health care, the regulations provided adequate protections for certain employers that objected to providing their female employees with contraceptive coverage based on their religious beliefs. The two exceptions originally implemented were for: (1) religious organizations and (2) nonprofits with religious objections. The regulations permitted religious employers such as churches to seek an "exemption" from the contraceptive-coverage requirement. *See* 45 C.F.R. § 147.131(a) (HHS regulation). Non-profits with religious objections were also allowed to opt out of the contraceptive-coverage requirement via an "accommodation," by which the nonprofit employer certifies its objection and the insurer is then responsible for separate contraceptive coverage.

96. Following three rounds of notice-and-comment rulemaking to develop and refine the accommodation regulations, which generated hundreds of thousands of public comments, the federal government enacted the "accommodation" process, which furthers the government's compelling interest in ensuring that women covered by every type of health plan receive full and equal health coverage, including contraceptive coverage, while safeguarding the religious rights of specific employers.

97. This process resulted in a relatively seamless mechanism for women, whose employers obtained the religious accommodation to continue to receive their ACA contraceptive coverage and helped the government ensure that no woman went without birth control as a result. *See* 80 FR 41318 (July 14, 2015) (prior regulation); 45 C.F.R. § 147.131(c)-(d) (prior regulation). This scheme ensured that those employees would not be adversely affected by their employers' decision to opt out. 45 C.F.R. § 147.131(c)-(d). At the same time, it ensured that certain employers who had religious objections could avoid providing for or paying for this coverage. Thus, this scheme struck a good balance for both the employer and the employee.

98. The religious accommodation was later expanded to include certain closely-held for-profit organizations with religious objections to providing contraceptive care, consistent with the

Supreme Court's decision in *Burwell v. Hobby Lobby Stores, Inc.*, 134 S. Ct. 2751 (2014); 80 FR 41318 (July 14, 2015); 45 C.F.R. § 147.131(b)(4). Further, in response to the Supreme Court's decision, an organization could use an alternative process of providing notice of its religious objections to providing for contraceptive coverage. Instead of filing a form with HHS or sending a copy of the executed form to its health insurance provider or third party administrator, the non-profit organization could simply notify HHS in writing of its objection to covering contraceptive coverage. *Wheaton College v. Burwell*, 134 S. Ct. 2806 (2014); 80 FR 41318.

### **III. NEW REGULATORY FRAMEWORK ILLEGALLY EXPANDS THE ABILITY OF EMPLOYERS TO OPT-OUT OF PROVIDING COST-FREE CONTRACEPTIVE COVERAGE UNDER THE ACA**

99. Without any notice, opportunity to comment, or evidence-based expert guidance, on October 6, 2017, Defendants promulgated sweeping new IFRs impeding women's access to cost-free contraceptive coverage as required by the ACA.

100. Prior to promulgating the IFRs, Defendants failed to meet or convene publically any women's, medical, or public health organizations that emphasize access to health care. For example, Defendants did not meet with the American Academy of Pediatrics, the American Association of Family Physicians, the American College of Physicians, the National Association of Nurse Practitioners in Women's Health, the National Partnership for Women and Families, or the Planned Parenthood Federation of America, among others. Defendants only met with organizations like the Heritage Foundation, Church Alliance, and the Ethics & Religious Liberty Commission of the Southern Baptist Convention.

101. The new IFRs vastly expand the scope of entities that may be exempt from the contraceptive-coverage requirement. They cast a wide net beyond religious organizations to any employer *or* individual *or* insurer, regardless of corporate structure or religious affiliation. This eviscerates the federally-backed religious accommodation, which balances the interest of employers wishing to opt-out of providing contraceptive coverage for employees while also ensuring seamless access to care for women. Further, this exemption has been extended to not

1 only a religious objection, but also to a new *moral* objection to the contraceptive-coverage  
2 requirements.

3 102. The IFRs, thus, expand the *Hobby Lobby* decision to nearly any business, non-profit  
4 or for-profit, with a moral objection against providing women access to contraceptive coverage,  
5 further frustrating the scheme and purpose of the ACA.

6 103. Additionally, under the new IFRs, employers seeking to be exempt from providing  
7 contraceptive coverage do not need to certify their objection to the coverage requirement. Rather,  
8 the employer can simply inform their employees they will no longer cover contraception benefits  
9 and counseling as part of their employer health care coverage. This is a significant change. By  
10 contrast, the prior federal regulations provided a process for women to be notified of their  
11 employers' decision to opt out and to maintain receive contraceptive coverage as a religious  
12 "accommodation" ensuring that employers who religiously objected to providing this coverage  
13 did not have to facilitate the provision of contraceptives. The federal government thereby ensured  
14 that there was a balance between the compelling interest that all women have access to their  
15 federally entitled benefit under the ACA, while also creating a religious accommodation for those  
16 employers that sought not to provide this coverage. The new IFRs eliminate the requirement of  
17 accommodation such that women whose employers opt for an exemption will not longer continue  
18 to receive this federally entitled coverage.

19 104. Further, these new IFRs create an entirely new "moral exemption" standard, which  
20 was not previously contemplated by the federal government, or given definitions or boundaries by  
21 the IFRs. Employers can simply make use of the new moral exemption, without informing their  
22 employees or the federal government. Thus, a whole new universe of employers can avail  
23 themselves of this moral exemption, which is left undefined, and which does not even require an  
24 accommodation process, and thereby vastly expands the number of women who will lose access  
25 to contraceptive care. Without the federal back stop or guidance over a federal entitlement, these  
26 women will simply be left without contraceptive coverage and with nowhere to go. The States  
27 will be forced to fill this gap.  
28

1           105. In short, under the new IFRs, exempted entities do not need to certify any objection to  
2 the contraceptive-coverage requirement to the federal government, which all but ensure that  
3 women across the country will go without birth control access as the ACA intended.

4           106. These IFRs could impact 6.6 million Californians who receive their health care  
5 through a self-insured employer health plan, and therefore do not receive the benefit of  
6 California's Contraceptive Equity Act.

7           107. There are at least 25 California employers, with 54,879 employees who will likely  
8 seek an exemption or accommodation. Thus, an unknown but substantial number of California  
9 women will be affected by these IFRs, and under these new IFRs, California anticipates that this  
10 number will vastly expand, eviscerating the ability of these women to access cost-free  
11 contraceptive coverage through their health plan. Consequently, they will turn to publicly funded  
12 clinics or California's wrap-around family program, Family PACT, to obtain the contraceptive  
13 coverage that is no longer being provided by employers or insurers, or being tracked by the  
14 federal government to ensure women maintain access as envisioned by the ACA.

15           108. There are at least 5 Maryland employers, with 6,460 employees who will likely seek  
16 an exemption or accommodation. Thus, an unknown but substantial number of Maryland women  
17 will be affected by these IFRs, and under these new IFRs, Maryland anticipates that this number  
18 will vastly expand, eviscerating the ability of these women to access cost-free contraceptive  
19 coverage through their health plan. Consequently, they will turn to publicly funded clinics or  
20 Maryland's Title X Program or Medicaid Family Planning Program, to obtain the contraceptive  
21 services no longer being provided by employers or insurers, or being tracked by the federal  
22 government to ensure women maintain access as envisioned by the ACA.

23           109. Based on publicly available data, the IFRs could impact approximately 1.16 *million*  
24 women in New York State who are currently covered by self-funded employer plans and thus  
25 subject to the vast reach of the new IFRs.

26           110. There are also several employers in the State of New York that challenged the ACA's  
27 contraception coverage mandate and accommodation provisions in court. Hobby Lobby Stores,  
28 Inc., the lead plaintiff in the Supreme Court case challenging the contraception mandate, *Burwell*

1 *v. Hobby Lobby*, 573 U.S. \_\_\_\_ (2014), is a for-profit national arts and crafts store chain, which  
2 has twelve store locations and approximately 600 employees in New York.

3 111. Two academic institutions located in New York also brought legal action against the  
4 accommodation provisions: The Christian and Missionary Alliance, which challenged the  
5 accommodation provisions, has an affiliate liberal arts college located in New York, Nyack  
6 College, which has approximately 2,500 students and approximately 1,200 employees. Biola  
7 University also brought a legal challenge to the contraception mandate, and its Master of Divinity  
8 graduate program, the Charles Feinberg Center for Messianic Jewish Studies, is located in New  
9 York. Biola University has approximately 1,000 students.

10 112. Upon information and belief, these entities would likely avail themselves of the IFRs'  
11 broad exemption criteria and not provide their substantial number of employees and students with  
12 insurance plans with contraceptive care coverage.

13 113. There are at least 10 Virginia employers, with 3,853 employees who will likely seek  
14 an exemption or accommodation. Thus, an unknown but considerable number of Virginia women  
15 will be affected by these IFRs, and under these new IFRs, Virginia anticipates that this number  
16 will vastly expand, eviscerating the ability of these women to access cost-free contraceptive  
17 coverage through their health plan. Consequently, they will turn to publicly funded clinics or  
18 Virginia's wrap-around family program, Plan First, to obtain the contraceptive coverage that is no  
19 longer being provided by employers or insurers, or being tracked by the federal government to  
20 ensure women maintain access as envisioned by the ACA.

21 114. The IFRs themselves estimate that, based on 2010 census data, between 31,700 and  
22 120,000 women will be harmed nationally. Based on the IFRs' own numbers, approximately  
23 12.6 percent of such harm will be inflicted upon California (approximately 4,000 – 15,000  
24 women); .3 percent of national harm will be inflicted upon Delaware (approximately 91 – 340  
25 women); 1.9 percent of national harm will be inflicted upon Maryland (approximately 600-2,200  
26 women); 6.5 percent of national harm will be inflicted upon New York (approximately 2,000-  
27 7,700 women); and 2.6 percent of national harm will be inflicted upon Virginia (approximately  
28 800-3,100 women).

115. By promulgating the IFRs, the States' concrete interest in ensuring access to contraceptive coverage is violated.

**FIRST CAUSE OF ACTION**  
**(Violation of APA; 5 U.S.C. § 553)**

116. Paragraphs 1 through 115 are realleged and incorporated herein by reference.

117. The APA generally requires agencies to provide the public notice and an opportunity to be heard before promulgating a regulation. An agency wishing to promulgate a regulation must publish in the Federal Register a notice of proposed rulemaking that includes “(1) a statement of the time, place, and nature of public rule making proceedings; (2) reference to the legal authority under which the rule is proposed; and (3) either the terms or substance of the proposed rule or a description of the subjects and issues involved.” 5 U.S.C. § 553(b). After the notice has issued, “the agency shall give interested persons an opportunity to participate in the rulemaking through submission of written data, views, or arguments with or without opportunity for oral presentation.” *Id.* § 553(c).

118. In narrow circumstances, the APA exempts agencies from this notice and comment process where they can show “good cause” that the process would be either “impracticable, unnecessary, or contrary to the public interest.” *Id.* § 553(b)(B). The burden is on the agency to demonstrate good cause, and courts have interpreted the exception narrowly. *See, e.g., Lake Carriers' Ass'n v. EPA*, 652 F.3d 1, 6 (D.C. Cir. 2011).

119. Defendants have not and cannot demonstrate good cause for failing to give any notice to the public or allowing for public comment prior to effectuating these new IFRs.

120. Notice and comment is particularly important in legally and factually complex circumstances like those presented here. Notice and comment allows affected parties—including states—to explain the practical effects of a rule before it is implemented, and ensures that the agency proceeds in a fully informed manner, exploring alternative, less harmful approaches. In the area of women's health care, it is particularly important to have an adequate notice and comment given that women have been relying on this benefit since 2012.

121. Because Defendants failed to follow section 553's notice and comment procedures, the regulations are invalid.

## SECOND CAUSE OF ACTION

### (Violation of APA; 5 U.S.C. § 706)

122. Paragraphs 1 through 121 are realleged and incorporated herein by reference.

123. The APA requires courts to "hold unlawful and set aside" agency action that is "(A) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law; (B) contrary to constitutional right, power, privilege, or immunity; (C) in excess of statutory jurisdiction, authority, or limitations, or short of statutory right." 5 U.S.C. § 706 (2).

124. By promulgating these new IFRs, without proper factual or legal basis, Defendants have acted arbitrarily and capriciously, have abused their discretion, have acted otherwise not in accordance with law, have taken unconstitutional and unlawful action in violation of the APA, and have acted in excess of statutory jurisdiction and authority. Defendants' violation causes ongoing harm to the States and their residents.

## THIRD CAUSE OF ACTION

### (Violation of the Establishment Clause)

125. Paragraphs 1 through 124 are realleged and incorporated herein by reference.

126. The First Amendment provides that "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof." U.S. Const., amend. I. "The clearest command of the Establishment Clause is that one religious denomination cannot be officially preferred over another." *Larson v. Valente*, 456 U.S. 228, 244 (1982); *see also McCreary County, Kentucky v. ACLU*, 545 U.S. 844, 875 (2005) ("the government may not favor one religion over another, or religion over irreligion").

127. The new IFRs privilege religious beliefs over secular beliefs as a basis for obtaining exemptions under the ACA.

128. In contrast, the prior regulations only allowed an exemption for churches and an accommodation for non-profits and closely-held for-profit companies with religious objections.

1 This was narrowly tailored to accommodate religious beliefs and still provide essential women's  
2 health care services.

3 129. By promulgating the new IFRs, Defendants have violated the Establishment Clause  
4 because the IFRs do not have a secular legislative purpose, the primary effect advances religion,  
5 especially in that they place an undue burden on third parties – the women who seek birth control,  
6 and the IFRs foster excessive government entanglement with religion.

7 130. The IFRs also ignore the compelling interest of seamless access to cost-free birth  
8 control. This crosses the line from acceptable accommodation to religious endorsement. Further,  
9 the IFRs essentially coerce employees to participate in or support the religion of their employer.

10 131. Defendants' violation causes ongoing harm to the States and their residents.

11 **FOURTH CAUSE OF ACTION**  
12 **(Violation of the Equal Protection Clause)**

13 132. Paragraphs 1 through 131 are realleged and incorporated herein by reference.

14 133. The Equal Protection Clause of the Fifth Amendment prohibits the federal  
15 government from denying equal protection of the laws.

16 134. The new IFRs specifically target and harm women. The ACA contemplated  
17 disparities in health care costs between women and men, and some of these disparities were  
18 rectified by the cost-free preventive services provided to women. The expansive exemptions  
19 created by the new IFRs undermine this action and adversely target and are discriminatory to  
20 women.

21 135. The new IFRs, together with statements made by Defendants concerning their intent  
22 and application, target individuals for discriminatory treatment based on their gender, without  
23 lawful justification.

24 136. By promulgating the new IFRs, Defendants have violated the equal protection  
25 guarantee of the Fifth Amendment of the U.S. Constitution.

26 137. Defendants' violation causes ongoing harm to the States and their residents.

27 //

**PRAYER FOR RELIEF**

WHEREFORE, the States respectfully request that this Court:

1. Issue a declaratory judgment that the IFRs are void for failing to comply with the notice and comment requirements of the APA;
2. Issue a declaratory judgment that the IFRs are arbitrary and capricious, not in accordance with law, and Defendants acted in excess of statutory authority in promulgating them;
3. Issue a declaratory judgment that the IFRs violate the Establishment Clause;
4. Issue a declaratory judgment that the IFRs violate the Equal Protection Clause;
5. Issue a preliminary injunction prohibiting the implementation of the IFRs;
6. Issue a mandatory injunction prohibiting the implementation of the IFRs;
7. Award the States' costs, expenses, and reasonable attorneys' fees; and,
8. Award such other relief as the Court deems just and proper.

1 Dated: November 1, 2017

Respectfully submitted,

2 XAVIER BECERRA  
Attorney General of California  
3 JULIE WENG-GUTIERREZ  
Senior Assistant Attorney General
